

The English dictionary states *'unique'* as 'being the only one of its kind; unlike anything else, unusual, or special in some way'.

Today we all pine for that latest gadget, the fastest car, the biggest house, but, we all crave that unique asset that separates us from everyone else.

Visanté garden television is the World's first fully outdoor television that is both technically brilliant and magnificently presented. We have developed a very unique product that both excites and entertains, a product that takes your television out of the confines of your house and into your garden.

Styled to be impressive, even when it's not being a television, Visanté can be finished in a range of colours and materials to fit your own style.

Today's television cannot be used outdoors – it is neither bright enough nor weatherproof. The launch of the Pye Visanté changes television viewing habits and compliments the outdoor lifestyle, which so many people are now embracing.

Advances in technology mean that the same LED technology used for outdoor video screens at prestige sports stadia and entertainment venues can now be used at home. *'Visanté'* utilises the best SMD LEDs available on the market to ensure absolute colour uniformity alongside outstanding efficiency. SMD (Surface Mount Device) is a small chip that contains the red, green and blue LEDs which are capable of producing a mind blowing 35 TRILLION colours.

The weatherproof outdoor properties have long been proven and, vitally, the screen brightness is exactly the same as professional screens used at concerts and outdoor venues.

Making an Impact- The Visanté television captivates its audience with its show stopping appearance, boundless entertainment options and excellent picture quality. As host you direct the performance from a tablet remote. Composing sound, seamlessly surfing the net, plug & play your gaming console or show casing the latest movie- a memorable experience is certain.

The screen is 3.1 metres wide by 1.9 metres high and presented in a bespoke contemporary design. We worked hard to create something that is both technically and aesthetically pleasing, but with years of development and dedication to bring you the best technology there is, we wanted to leave the pleasurable part to you!- we have a wide range of materials and finishes for you to select from to further enhance your landscaped garden. Whether its carbon fibre, wood, mirrored aluminium or even brightly coloured resin, you are sure to make an impact!

Each visanté is unique, reflecting your own individual taste and requirements, and the accompanying audio system is no less so. From the outset we establish the location of the 'listening zone' and design the audio solution to fit.

Ambex video lighting adds an additional dynamic quality to night time viewing. Tiny lights hidden in the bodywork react in time to the video creating a dynamic light show to accompany the video.

As well as impact, the television has unique and innovative features which allows you to operate the screen in stealth mode- the rear facing camera simply shows your garden view behind it.

Every product comes with an 'art channel' membership allowing contemporary art and sculptures to be shown on the screen when not in use.

All of our development work has been driven by a single purpose: to create a stunning addition to your home that is both beautiful and a spellbinding enhancement to your family and alfresco social life.

Every home owner wants to enhance the charm of their home and garden, and the next time you want to host a family and friends garden party to enjoy the football, motor racing or a concert, you have the perfect gadget and can easily do so using the Pye Visanté television.
